

## Veterinary Surgical Meshes

### ► Surgical meshes ◀

Polypropylene

# POLYPROPYLENE

General Surgery

- ▶ Veterinary Surgical mesh is made of a polypropylene monofilament that is woven to a smaller diameter, which allows stretching in both directions to accommodate and reinforce tissue defects, the high resistance of the mesh allows you to work safely and reliably.
- ▶ Veterinary Surgical mesh is recommended for interventions in general surgery. It aims to reinforce weakened tissue, repairing hernias, and abdominal wall defects.
- ▶ Veterinary surgical mesh is inert in case of infection.

### Scale 5:1

Tensile strength <b>≥ 18 Kgf</b>	Typical size pore (mm) <b>1.2 x 1.4</b>
Weight (g/m2) <b>80</b>	Thickness (mm) <b>0.56</b>

### Uses:

- Hernias and eventration

Inches		Centimeters	
Length	Width	Length	Width
3"	6"	7.5 cm	15.0 cm
6"	6"	15.0 cm	15.0 cm
12"	12"	30.0 cm	30.0 cm

## Benefits

- ▶ Security
- ▶ High Resistance
- ▶ Reliability
